Authors Peter von Sivers, Charles A. Desnoyers, and George Stow--each specialists in their respective fields--examine the full range of human ingenuity over time and space in a comprehensive, even-handed, and critical fashion. The book helps students to see and understand patterns through: ORIGINS - INTERACTIONS - ADAPTATIONS. These key features show the O-I-A framework in action: * Seeing Patterns, a list of key questions at the beginning of each chapter, focuses students on the 3-5 over-arching patterns, which are revisited, considered, and synthesized at the end of the chapter in Thinking Through Patterns * Each chapter includes a Patterns Up Close case study that brings into sharp relief the O-I-A pattern using a specific idea or thing that has developed in human history (and helped, in turn, develop human history), like the innovation of the Chinese writing system or religious syncretism in India. Each case study clearly shows how an innovation originated either in one geographical center or independently in several different centers. It demonstrates how, as people in the centers interacted with their neighbors, the neighbors adapted to--and in many cases were transformed by--the idea, object, or event. Adaptations include the entire spectrum
