New Social Movements, Class, and the Environment explores the history of Greenpeace Canada from 1971 to 2010 and its relationship to the working class. In order to understand the ideology behind Greenpeace, the author investigates its structure, personnel, and actions. The case study illustrates important contradictions between new social movement theory and practice and how those contradictions affect the working class. In particular, Greenpeace’s actions against the seal hunt, against forestry in British Columbia, and against its own workers in Toronto, demonstrate some of the historic obstacles to working out a common labour and environmental agenda. The 1970s saw an explosion of new social movement activism. From the break up of the New Left into single issue groups at the end of the 1960s came a multitude of groups representing the peace movement, environmental movement, student movement, women’s movement, and gay liberation movement. This explosion of new social movement activism has been heralded as the age of new radical politics. Many theorists and activists saw, and still see, new social movements, and the issues, or identities they represent, as replacing the working class as an agent for progressive social change. This paper examines these claims through a case study of the quintessential new social movement, Greenpeace.

Dragons. Right. Teenage girls don’t believe in fairy tales, and sixteen-year old Elena Watkins was no different. Until the night a fairy tale killed her father. Now Elena’s in a new world, and a new school. The cutest guy around may be an evil dragon, a Prince wants Elena’s heart, and a long dead sorcerer may be waking up to kill her. Oh. And the only way Elena’s going to graduate is on the back of a dragon of her own. Teenage girls don’t believe in fairy tales. Now it’s time for Elena to believe – in herself.

Why does water always take a winding course in streams and rivers? Do common principles and rhythms underlie its movement - whether it be in the sea, in a plant, or even in the blood of a human being? In this seminal and thought-provoking work, the laws apparent in the subtle patterns of water in movement are shown to be the same as those perceptible in the shaping of bones, muscles and a myriad of other forms in nature. Fully illustrated, Sensitive Chaos reveals the unifying forces that underlie all living things. The author observes and explains such phenomena as the flight of birds, the formation of internal organs such as the heart, eye and ear, as well as mountain ranges and river deltas, weather and space patterns, and even the formation of the human embryo.

This Old House meets Wayne's World in this zany guide to designing and building tiny homes Derek Diedricksen has always had a love for small, modest houses ever since his father gave him the book *Tiny Tiny Houses* by Lester Walker for his tenth birthday. Combining his artistic abilities, wild imagination, and his passion for small houses, he self-published *Humble Homes, Simple Shacks, Cozy Cottages, Ramshackle Retreats, Funky Forts, and Whatever the Heck Else we could Squeeze in Here* in 2009. This book is a collection of Diedricksen's creative/imaginative sketches for building small houses, shacks, cottages, and forts. The sketches are accompanied with hand-written commentary, both instructive and comical. Derek's main purpose is to get your creative juices flowing and encourage you to get off the couch and use your hands. Believing that specific building plans squash creativity, he avoids too many detailed instructions, giving you the chance to put your own creative spin on your very own small abode (even if it is just in your imagination).
